TECHNICAL PARTNERSHIP PROPOSAL AGENCY WING

Dedicated Offshore AI Engineering, Systems Integration & Continuous Maintenance for IMM

Client: IMM (20-Year Established US Agency)
Engagement: Technical Execution & White-Label Partner
Lead Contact: Viranga Lakshan (Solutions Architect)
Model: Boutique Agency (Tech Lead + Senior Engineers)

Empowering IMM's AI & Enterprise Integration Expansion

A high-caliber boutique engineering team designed to serve as IMM's dedicated offshore technology wing. Delivering custom AI applications, autonomous agents, enterprise systems integration (APIs, CRMs, ERPs), and robust workflow automations with US-aligned coverage, guaranteed incident SLAs, and client-facing technical leadership.

Focus: **Custom AI Agents • RAG • Folder/Doc Ingestion**
Integrations: **HubSpot • Salesforce • ERPs • REST/GraphQL**
Automation: **n8n • Make • Zapier • Event-Driven Python**
Support: **8+ Hrs Daily Coverage • 1-Hour Critical SLA**
Ramp-Up: **Ready to Pilot with a Paid Proof of Concept**

1. STRATEGIC PARTNERSHIP PHILOSOPHY

Why a Boutique Engineering Agency is the Ideal Model for IMM

Agency-First White-Label Execution — IMM RETAINS CONTROL

IMM owns client relationships, strategic direction, and project ownership. We operate seamlessly behind your brand or as your integrated technical branch:

- **Client-Facing Solutions Engineer:** Fluent English-speaking Technical Lead available to co-pilot discovery sessions, clarify technical scope, and architect solutions alongside IMM account leads.
- **Zero Junior Hand-Offs:** You interface directly with senior architects and full-stack builders who write and maintain the codebase.
- **Transparent Velocity:** Sprint planning, daily Slack updates, shared staging environments, and clean Git commits.

Practical Engineering Over Tech Hype — BUSINESS IMPACT

We value solid computer science fundamentals, maintainability, and tangible business ROI over bleeding-edge instability:

- **Cost-Effective AI Architectures:** Balancing LLM token economics (GPT-4o, Claude 3.5 Sonnet, local open-source models) with caching, semantic search, and deterministic logic.
- **Modular Systems Design:** Decoupled microservices and webhook architectures that prevent vendor lock-in and simplify client scaling.
- **Defensive Engineering:** Comprehensive schema validation, idempotency in payment/CRM syncs, and structured audit logs.

2. CORE TECHNICAL COMPETENCY PILLARS

Comprehensive Engineering Across Modern Stacks

AI & Agents — LLM / RAG

Autonomous multi-agent systems (LangGraph, CrewAI), folder/document embeddings, vector stores (Pinecone, pgvector), and custom domain copilots.

Integrations — APIS & CRMS

Bidirectional sync across Salesforce, HubSpot, GoHighLevel, Zoho, ERPs, payment gateways, and bespoke legacy relational databases.

Automations — N8N / MAKE

Complex multi-branch workflows in n8n (cloud/self-hosted), Make, Zapier, paired with custom Python/Node serverless event microservices.

Cloud & Security — AWS / GCP

Docker containers, CI/CD pipelines, OAuth2/JWT auth, OWASP hardening, zero data retention for PII, and strict role-based access.

Proven Low-Risk Onboarding: Paid Proof of Concept (PoC)
To initiate the partnership with zero risk to IMM's client reputation, we propose starting with a tightly scoped, paid Proof of Concept, isolated API integration, or marketing automation pilot. This allows IMM leadership to assess our architectural rigor, communication velocity, and code quality before rolling us out across broader client accounts.

TECHNICAL CAPABILITIES & ARCHITECTURE

STACK & DEEP DIVE

Production-Ready AI Applications, Systems Integration, and Robust Workflow Pipelines

AI Stacks: LangChain, LangGraph, LlamaIndex, OpenAI, Anthropic
Automation: n8n, Make, Zapier, Python FastAPI, Celery
Data & Cloud: PostgreSQL, Redis, pgvector, Docker, AWS, GCP

3. DETAILED TECHNICAL CAPABILITIES MATRIX

What We Deliver for IMM and Your Client Base

DOMAIN	CORE TECHNICAL CAPABILITIES	PRACTICAL CLIENT APPLICATIONS
Custom AI & Agent Systems	LLM integrations (OpenAI GPT-4o, Claude 3.5 Sonnet, Gemini Flash), autonomous agent orchestration (LangGraph, CrewAI), folder/document ingestion engines, RAG pipelines with chunking and reranking, structured tool-use functions.	Customer support AI agents, automated proposal builders, document Q&A tools, internal business copilots, and content transformation engines.
Enterprise Systems Integration	RESTful & GraphQL API engineering, webhook receivers with replay protection, ETL pipelines, bidirectional CRM sync (HubSpot, Salesforce, Zoho, HighLevel), ERP database connectors, and payment flows.	Connecting disparate client CRMs with billing databases, synchronizing inventory across e-commerce channels, and building unified analytics hubs.
Workflow Automation & Ops	Advanced multi-step scenarios in self-hosted and cloud n8n, Make (Integromat), Zapier, supplemented with asynchronous Python/FastAPI queues (Redis, Celery) for high-volume transformations.	Automated lead routing & scoring, automated invoice reconciliation, multi-channel client onboarding sequences, and automated data hygiene.
Software & Cloud Development	Full-stack architectures using Python (FastAPI, Django), Node.js/TypeScript, React/Next.js, PostgreSQL, Docker containerization, AWS (ECS, Lambda, RDS, S3), and automated GitHub Actions CI/CD.	Bespoke client web portals, internal admin dashboards, microservices, and SaaS extension backends engineered for 99.9% uptime.
Security & Data Protection	OAuth 2.0 / JWT authentication, Role-Based Access Control (RBAC), end-to-end encryption in transit (TLS 1.3) and at rest (AES-256), OWASP compliance, and zero PII retention policies for AI prompts.	HIPAA/GDPR-conscious client solutions, enterprise single sign-on (SSO), secure client data silos, and prompt injection defense barriers.

4. END-TO-END SOLUTION ARCHITECTURE

How We Architect Client AI & Automated Integration Pipelines

STAGE 01: INGESTION & TRIGGER

Data Influx & Webhooks

Capturing incoming events from client CRMs, forms, or cloud storage folders (PDFs, docs, tables) with payload signature verification and schema validation.

→

STAGE 02: PROCESSING & AI

Workflow & Agent Engine

- **Orchestration:** Multi-branch logic in `n8n` or custom `FastAPI`.
- **RAG & Context:** Vector retrieval from `pgvector` / `Pinecone`.
- **Agent Execution:** Task execution via tool calling and LLM reasoning.
- **Guardrails:** Output formatting, prompt injection defense, and sanitization.

→

STAGE 03: DELIVERY & SYNC

Destination & Auditing

Writing enriched records back to client CRMs/ERPs, triggering marketing workflows, alerting team channels, and archiving audit trails for compliance.

5. SUPPORTING IMM'S DIGITAL MARKETING DOMAIN

Enhancing Client Retention and Campaign ROI Through Automation

Lead Nurturing & Scoring

CONVERSION

Automating multi-touch lead scoring using behavioral signals and AI summarization, alerting sales reps in real time when high-value prospects engage.

Attribution & Reporting Sync

ANALYTICS

Pulling ad metrics, web analytics, and CRM deal closures into unified BigQuery/PostgreSQL dashboards to give IMM clients crystal-clear ROAS proof.

Dynamic Content Personalization

AI MARKETING

Using AI models to generate industry-tailored email copy variations and landing page content dynamically, increasing campaign open and click rates.

COLLABORATION MODEL & QUALITY STANDARDS

Client-Facing Discovery Protocols, Agile Delivery, and Enterprise Development Etiquette

EXECUTION

Communication: Slack, Teams, Zoom, Loom, ClickUp, Jira
Delivery: 2-Week Sprints, Staging Envs, Automated Tests
Timezone: Overlapping US Business Hours (EST / CST)

6. CLIENT DISCOVERY & WHITE-LABEL COLLABORATION PROTOCOL

Seamless Collaboration Between IMM Leadership and Our Technical Team

Client-Facing Technical Lead Protocols

DISCOVERY CO-PILOT

When IMM requires technical presence on client discovery calls, our Technical Lead steps in with complete professionalism:

- **Representing IMM:** We participate under IMM's brand identity (e.g. using IMM email alias, Zoom backgrounds, and communication channels).
- **Translating Needs to Architecture:** Actively listening to non-technical client requirements, validating integration feasibility, and proposing phased roadmaps.
- **Scoping & Architecture Documents:** Producing rapid Architecture Decision Records (ADRs), system topology diagrams, and scoped sprint deliverables within 24 hours of discovery calls.

Daily Communication & Accountability

ZERO FRICTION

You will never be left wondering about task status or upcoming blockers. We prioritize radical transparency:

- **Async Standups & Loom Demos:** Daily written progress summaries in Slack/Teams and 3-minute video walkthroughs of newly built features and automations.
- **Real-Time Collaboration:** Immediate availability during US core working hours for technical syncs, code reviews, or urgent troubleshooting.
- **Versioned Documentation:** Comprehensive technical runbooks, API contracts, schema definitions, and credentials stored securely in 1Password.

7. DEVELOPMENT LIFECYCLE & QUALITY ASSURANCE

Building Scalable, Maintainable Systems from Day One

Git & CI/CD Pipelines

AUTOMATED DELIVERY

Strict Git branching models (main, staging, feature branches) with GitHub Actions automating linting, static code analysis, and unit test suites before any pull request is merged.

Isolated Staging Envs

ZERO PRODUCTION RISK

Every client integration is built and thoroughly stress-tested in dedicated staging sandboxes with mock API payloads before promoting to live production environments.

Regression & Error Handling

SELF-HEALING

Automated retry mechanisms with exponential backoff for external API timeouts, dead-letter queues (DLQs) for failed webhook payloads, and instant alerts via Sentry.

8. SECURITY, DATA PRIVACY & RESPONSIBLE AI FRAMEWORK

Protecting IMM and Your Clients from Vulnerabilities and Data Leaks

Zero PII Retention

PRIVACY FIRST

Configuring commercial LLM endpoints with Zero Data Retention (ZDR) agreements. Client intellectual property and customer PII are never used to train external models.

Access Control & RBAC

PRINCIPLE OF LEAST PRIVILEGE

Fine-grained role-based permissions, scoped API keys with time-to-live restrictions, multi-factor authentication, and encrypted environment secret managers.

Prompt Injection Defense

AI SAFETY

Implementing dual-layer prompt guardrails, semantic input sanitization, and output schema enforcement (JSON Schema / Pydantic) to prevent prompt injection and system jailbreaks.

MAINTENANCE SLAS, ENGAGEMENT & TEAM

LONG-TERM GROWTH

Support Hours: 8+ Hours Daily US Coverage
P1 SLA: < 1-Hour Response Target
Engagement: Flexible PoC → Dedicated Retainer

Incident Severity Matrix, Dedicated Support Window, and Commercial Framework

9. MAINTENANCE & SUPPORT SLA MATRIX

Guaranteed Response Times and Incident Escalation Hierarchy

SEVERITY	INCIDENT DEFINITION	RESPONSE SLA	TARGET RESOLUTION	ESCALATION ACTION
P1 - CRITICAL	Complete production outage, payment gateway failure, critical data sync interruption affecting clients.	**< 1 Hour**	< 4 Hours or immediate rollback	Immediate hot-page to Technical Lead & on-call engineer; client bridge opened.
P2 - HIGH	Core integration or AI workflow impaired with workaround available; degraded performance.	**< 2 Hours**	Same business day (< 8 Hours)	Direct assignment to senior builder; daily progress reports to IMM manager.
P3 - MEDIUM	Minor functional bug, edge-case automation failure, UI display glitch not impeding revenue.	**< 4 Hours**	Within 24–48 Hours	Queued in active sprint backlog; resolved in next deployment cycle.
P4 - LOW	Feature enhancements, copy updates, non-critical technical maintenance, dependency bumps.	**< 1 Business Day**	Scheduled Sprint Cycle	Estimated during bi-weekly sprint planning session.

10. FLEXIBLE ENGAGEMENT & PARTNERSHIP MODELS

Designed to Start Lean and Scale Predictably as IMM Expands

1. Paid Proof of Concept — LOWEST RISK

Scope: Single AI agent, targeted API integration, or n8n automation workflow.

Structure: Fixed-price or milestone-based pilot.

Goal: Validate turnaround speed, architectural depth, and client communication firsthand.

2. Dedicated Retainer — AGENCY PARTNER

Scope: Dedicated monthly engineering hours allocated across IMM's client projects.

Structure: Predictable monthly retainer with guaranteed team availability.

Goal: Acts as IMM's internal engineering wing with priority queue and rapid turnaround.

3. Project-Based Sprints — ON-DEMAND

Scope: Large custom client platforms, end-to-end AI portals, or multi-system overhauls.

Structure: Milestone deliverables with defined acceptance criteria and warranty period.

Goal: Flexible scaling for surge client demand without fixed agency overhead.

11. DEDICATED SENIOR ENGINEERING TEAM

Full Resumes Attached in Proposal Package

Viranga Lakshan — Lead Solutions Architect

Role for IMM: Technical Lead & client-facing solutions engineer. Fluent English speaker leading client discovery, system architecture, AI pipeline design, and security governance.

Janith Kavishka — Sr. Automation & Integration Eng.

Role for IMM: Workflow automation and API specialist. Expert in n8n, Make, Zapier, Python FastAPI, webhook architectures, and bidirectional CRM/ERP synchronization.

Lithumitha Ravikumar — Sr. Software & Data Engineer

Role for IMM: Full-stack, database, and RAG engineer. Specialized in vector databases (Pinecone, pgvector), PostgreSQL tuning, Docker, and AWS/GCP cloud deployments.

Suggested Next Step: 30-Minute Architecture & Partnership Alignment Call

We would be delighted to connect for a 30-minute introductory call to review IMM's current client commitments, upcoming AI/integration needs, and identify a candidate pilot project to demonstrate our engineering velocity. We are available to start immediately.
