VIRANGA LAKSHAN

SENIOR SOFTWARE ENGINEER

Senior Software Developer, CRM Platform • C#, ASP.NET MVC & AWS Cloud Architecture

Engagement: Full-Time (>30–40 hrs/wk) • Hourly
Working Hours: 100% Pacific Time (PT) Business Hours
Proposed Rate: $18.00 – $20.00 / hr (Contract-to-Hire)
Availability: Immediate Start (Within 24–48 Hours)

Executive Profile & Technical Value Proposition

Senior Full-Stack & .NET Software Engineer with **5+ years of hands-on production engineering experience** specializing in high-scale C#, ASP.NET MVC, .NET Framework 4.8, and modern .NET. Veteran of mature, large-scale codebases written by others, 24/7 on-call incident response, and AWS cloud integrations. Fully committed to working full Pacific Time business hours on an immediate contract-to-hire basis.

5+ Years	100% PT	AWS Certified	24/7 On-Call
PRODUCTION C# / .NET	PACIFIC TIME OVERLAP	LAMBDA, S3, EC2, DYNAMO	PAGERDUTY & DATADOG TIER-3

1. DIRECT TECHNICAL REQUIREMENTS ALIGNMENT MATRIX

100% Compliance with Posted Engagement Criteria

CLIENT JOB REQUIREMENT	VIRANGA'S PRODUCTION EXPERIENCE & DEMONSTRATED TRACK RECORD	STATUS & MATCH
4+ Years C# & ASP.NET MVC	5+ years developing, maintaining, and scaling enterprise C# web applications, ASP.NET MVC custom filters, model binders, and Razor views.	**Exceeds (5+ Yrs)**
.NET Framework 4.8 Knowledge	Deep expertise in .NET Framework 4.8 runtime, IIS application pools, `System.Web` pipeline, Autofac/Unity DI, and legacy assembly binding.	**100% Expert**
Large Existing Codebases	Inherited, refactored, and stabilized multi-year enterprise codebases (Singer PLC, SomBank TP V5 core) without introducing functional regressions.	**Proven Track Record**
Hands-on AWS Experience	Production delivery across **EC2** (ALB auto-scaling), **S3** (pre-signed document URLs), **Lambda** (C# serverless workers), and **DynamoDB** (audit logs).	**All 4 Services**
JavaScript UI Frameworks	Building dynamic frontend modules, responsive data tables, client-side validation, and real-time CRM updates using modern JS, TypeScript, React, and Vue.	**Full-Stack Fluidity**
CI/CD & DevOps Practices	Continuous integration with **TeamCity**, automated blue/green multi-tenant releases in **Octopus Deploy**, and infrastructure monitoring.	**TeamCity & Octopus**
24/7 Production On-Call	Veteran of Tier-3 24/7 production on-call rotations using **PagerDuty** and **Datadog APM**; strict 5-min response SLA and blameless post-mortems.	**Production Tested**
Mentorship & Code Reviews	Conducted hundreds of structured code reviews; led engineering design sessions, standardized SOLID principles, and mentored junior developers.	**Active Mentor**
Pacific Time Business Hours	Fully dedicated to working 8:00 AM – 5:00 PM Pacific Time (PT), enabling real-time collaboration on Slack, Zoom, and standups.	**Full PT Overlap**

2. COMMERCIAL PROPOSAL & COMMITMENT TERMS

Aligned Directly with Client Budget and Contract-to-Hire Model

Hourly Rate & Budget — TARGET RATE

Proposed Rate: $18.00 – $20.00 / hr
Comfortably aligned with client's $15.00 – $20.00 posted range. Delivers senior-level architecture and execution at exceptional value.

Duration & Capacity — FULL-TIME

Allocation: 40 Hours / Week (>30 hrs/wk mandate).
Duration: 6-Month contract with immediate readiness and long-term intent for **contract-to-hire** conversion.

Time Zone & Start Date — IMMEDIATE

Time Zone: 100% Pacific Time (PT) overlap.
Start Date: Immediate kickoff within 24–48 hours of offer acceptance and repository provisioning.

TECHNICAL COMPETENCIES .NET & AWS

ASP.NET MVC 4.8, C# Clean Architecture, AWS Cloud Stack & Code Modernization

Runtime: .NET Framework 4.8 ➔ Modern .NET 8
AWS Stack: Lambda • S3 • EC2 • DynamoDB
Frontend: React • Vue • TypeScript • ASP.NET Razor

3. C# & ASP.NET MVC MASTERY (.NET FRAMEWORK 4.8 CORE)

Enterprise Patterns, Legacy Stabilization, and Clean Architecture

ASP.NET MVC Pipeline & .NET 4.8 Architecture — CORE ENGINE

Deep experience engineering within the ASP.NET MVC 5 / .NET 4.8 pipeline:

- **Custom Action Filters & Attributes:** Building centralized authorization filters, audit logging interceptors, and exception handling pipelines.
- **Dependency Injection & Inversion of Control:** Standardizing constructor injection via Autofac, Unity, and SimpleInjector across legacy WebForms and MVC controllers.
- **High-Throughput Data Access:** Profiling and optimizing Entity Framework 6 (EF6) and Dapper queries; eliminating N+1 lazy-loading cascades and tuning SQL transactions.
- **Memory & LOH Optimization:** Preventing Large Object Heap fragmentation through stream-based JSON parsing and memory buffer reuse.

Mastering Large Existing Codebases Written by Others — ZERO REGRESSIONS

Specialized methodology for diving into undocumented, multi-year legacy code:

- **Characterization & Golden Master Testing:** Writing automated integration tests to lock down current input/output behavior before touching legacy code.
- **Dependency Decoupling (Seam Identification):** Abstracting monolithic God classes behind clean domain interfaces using Michael Feathers' refactoring techniques.
- **Zero-Regression Discipline:** Deploying changes in small, self-contained PRs with verified automated unit tests and smoke tests.
- **Fast Ramp-up:** Quickly deciphering database schemas, stored procedures, and implicit business rules without slowing down sprint cadence.

4. .NET FRAMEWORK 4.8 TO MODERN .NET (.NET 8) MIGRATION STRATEGY

Pragmatic, Zero-Downtime Strangler-Fig Modernization Pattern

Step 1: Domain Decoupling — STEP 01

Extracting business logic, entity models, and calculation engines from `System.Web` into **.NET Standard 2.0** class libraries compatible with both .NET 4.8 and .NET 8.

Step 2: YARP Reverse Proxy — STEP 02

Deploying Microsoft YARP (Yet Another Reverse Proxy) in front of IIS. High-value API endpoints are re-architected in .NET 8 while legacy views route seamlessly to .NET 4.8.

Step 3: EF Core Transition — STEP 03

Transitioning legacy EF6 EDMX models to Code-First mappings, adopting EF Core batching, compiled queries, and connection resilience with zero database schema disruption.

5. HANDS-ON AWS CLOUD ARCHITECTURE (LAMBDA, S3, EC2, DYNAMODB)

Production Integration with AWS SDK for .NET

AWS EC2 & S3 Document Storage — COMPUTE & ASSETS

- **EC2 Workload Hosting:** Provisioning Windows Server IIS instances behind Application Load Balancers (ALB) with auto-scaling groups and SSL offloading.
- **S3 Pre-Signed URL Architecture:** Offloading file uploads/downloads (CRM contracts, customer attachments, email exports) directly to Amazon S3 using pre-signed URLs, reducing EC2 memory load by 70%.
- **Lifecycle Policies:** Implementing S3 Intelligent-Tiering and Glacier archiving for historical customer audit records to slash storage overhead.

AWS Lambda & DynamoDB Services — SERVERLESS & NOSQL

- **C# Serverless Lambda Functions:** Building asynchronous microservices for background CRM tasks: webhook payload ingestion, daily sales summaries, and batch CSV imports.
- **Amazon DynamoDB Single-Table Design:** Designing high-velocity audit logging and customer activity streams using composite partition keys (`TenantId#EntityId`) and sort keys.
- **Event-Driven Pipelines:** Connecting Amazon S3 bucket events and SQS queues to C# Lambda consumers for resilient, self-healing background processing.

Frontend JavaScript & UI Framework Fluidity

Experienced in bridging ASP.NET MVC server-rendered views with modern client-side JavaScript frameworks (React, Vue, TypeScript). Skilled in building rich CRM pipeline Kanban boards, real-time client activity timelines, asynchronous form submission with optimistic UI updates, and responsive multi-column data grids.

DEVOPS & RELIABILITY 24/7 PRODUCTION

TeamCity, Octopus Deploy, Datadog APM, PagerDuty On-Call & Team Mentorship

CI/CD Tooling: TeamCity • Octopus Deploy
Observability: Datadog APM • CloudWatch • SQL Profiler
On-Call Discipline: 24/7 Tier-3 Rotation • PagerDuty Sev-1/Sev-2

6. AUTOMATED CI/CD PIPELINES (TEAMCITY & OCTOPUS DEPLOY)

Repeatable, Zero-Downtime Multi-Environment Deployments

TeamCity Continuous Integration — BUILD & TEST

Configuring resilient build pipelines that validate code quality on every push:

- **Automated Solution Builds:** MSBuild orchestration restoring NuGet packages, compiling Release targets, and executing Roslyn static analyzers.
- **Automated Test Execution:** Running unit and integration test suites (NUnit / xUnit) with code coverage thresholds blocking broken builds.
- **Artifact Packaging:** Bundling versioned NuGet packages and Octopus release artifacts with semantic versioning and Git commit SHA tagging.

Octopus Deploy Continuous Delivery — RELEASE ENGINE

Managing clean multi-tenant and multi-environment deployment progression:

- **Environment Progression:** Controlled deployment gates across Development ➔ Staging ➔ UAT ➔ Production.
- **Configuration Transforms:** Managing sensitive environment variables, connection strings, and AWS IAM role bindings via Octopus scoped variables.
- **Zero-Downtime Deployments:** Implementing blue/green IIS deployments and health check warm-ups before taking legacy instances offline.

7. PRODUCTION MONITORING & 24/7 ON-CALL ROTATIONS (DATADOG & PAGERDUTY)

Battle-Tested Incident Management and Telemetry Discipline

Datadog APM & Telemetry — MONITORING

Instrumenting end-to-end tracing across IIS, C# controllers, EF6 database queries, and external APIs:

- p95/p99 endpoint latency tracking.
- Slow SQL query execution alerts.
- Real-time 5xx error rate anomaly detection.
- Custom CRM business transaction metrics.

PagerDuty 24/7 On-Call — INCIDENT RESPONSE

Disciplined incident handler experienced in active 24/7 primary and secondary rotations:

- Strict <5-minute page acknowledgment.
- Fast triage: isolate host vs DB vs network.
- Rapid mitigation: rollbacks, pool recycles.
- Clear stakeholder communications during outages.

Post-Mortem & Prevention — RESILIENCE

Turning production incidents into permanent platform improvements:

- Authoring blameless post-mortem reports.
- Root cause analysis (5 Whys methodology).
- Implementing defensive circuit breakers.
- Refining alert thresholds to eliminate alert fatigue.

8. ENGINEERING MENTORSHIP, CODE REVIEWS & TEAM CULTURE

Fostering High Technical Standards and Collective Velocity

Constructive, High-Standard Code Reviews — QUALITY GATE

Reviewing PRs not just for syntax, but for architectural soundness, thread safety, database indexing implications, memory leaks, and adherence to SOLID principles. Providing clear, actionable, and encouraging feedback that levels up team capabilities.

Pair Programming & Developer Mentorship — MENTORSHIP

Actively guiding junior and mid-level developers through complex debugging sessions, architectural trade-offs, and legacy refactoring. Developing internal documentation, onboarding runbooks, and design guidelines to accelerate new developer velocity.

Commitment to Production Reliability

Having supported mission-critical platforms handling millions of daily customer transactions, I understand that software engineering does not end at code commit. I take personal ownership of production stability, proactive monitoring, and zero-defect deployments.

PRODUCTION TRACK RECORD CASE STUDIES

Enterprise Systems Track Record, CRM Domain Expertise & 30-Day Onboarding Plan

Scale Proven: 400+ Sites • 1M+ Daily Transactions
Domain Focus: CRM • B2B SaaS • Multi-Tenant Platforms
Readiness: Immediate Start • Full Pacific Time Hours

9. PROVEN ENTERPRISE PRODUCTION CASE STUDIES

Demonstrated Technical Excellence in Complex Multi-Tenant Platforms

Case Study 01: Enterprise Financial Platform (MFCS)

400+ SITES • 1M+ DAILY WRITES

Client / Scope: Nationwide collection and customer account settlement platform deployed across 400+ branch locations and field terminals.

- **Zero Record Loss:** Strict ACID transaction boundaries processing over 1,000,000+ daily receipt postings without a single dropped transaction.
- **Lock Contention Elimination:** Replaced blocking row locks with atomic batch CTEs, reducing lock wait times from 1,450ms to 45ms.
- **Latency Drop:** Slashed p95 end-of-day synchronization latency from 3,200ms to 480ms (-85.0%).
- **Cloud Modernization:** Migrated database layers to AWS RDS with continuous uptime.

Case Study 02: Mature Banking Platform (SomBank TP V5)

2-YEAR MATURE CORE CODEBASE

Client / Scope: Engineering Change Requests on an existing 2-year-old mission-critical banking core written by third-party vendor teams.

- **Zero-Regression Feature Additions:** Successfully extended C# .NET Web API endpoints and financial balance calculators without breaking existing integrations.
- **Safety Test Harness:** Designed comprehensive integration test suites before modifying legacy stored procedures and entity mappings.
- **Security Compliance:** Enforced OAuth2 / JWT authentication, role-based permissions, and immutable audit event logging.

10. CRM & B2B SAAS DOMAIN KNOWLEDGE

Architectural Intuition for Customer Data, Pipelines, and Integrations

Multi-Tenant Data Isolation

DATA SECURITY

Guaranteed data segregation across tenants using indexed `TenantId` scoping in repository filters, preventing cross-organization data leakage.

Custom Fields & Extensibility

SCHEMA DESIGN

Architecting hybrid relational-JSON schemata allowing enterprise clients to define custom fields on Contacts, Deals, and Accounts with high-speed indexing.

Webhook & 3rd-Party APIs

INTEGRATIONS

Engineering resilient incoming and outgoing webhook engines with automated retry policies, idempotency keys, and signature verification.

11. RAPID 30-DAY ONBOARDING & VALUE DELIVERY ROADMAP

From Day-1 Environment Setup to Independent Feature Ownership

Days 1 – 7: Ramp-Up

ONBOARDING

Clone solution, establish working local builds, verify TeamCity CI pipeline, map core domain models, and ship first low-risk bug fix / documentation PR.

Days 8 – 20: Feature Velocity

EXECUTION

Take ownership of assigned sprint tickets in ASP.NET MVC / C#, write automated unit tests, actively contribute to code reviews, and shadow senior on-call rotation.

Days 21 – 30: Autonomous Drive

OWNERSHIP

Deliver end-to-end CRM features independently, participate fully as primary in PagerDuty on-call rotations, and identify proactive .NET / AWS optimization targets.

Ready for Immediate Technical Interview & Code Pairing

I am available immediately for an introductory interview, technical deep-dive, or live code review pairing session at your convenience in Pacific Time. Let's connect to discuss how I can accelerate your CRM platform engineering goals.
