To: Leadership Team & Founders, Wealth Wisdom
Website: wealthwisdom.co.za | Location: Pretoria, South Africa | Focus: Financial Coaching & Training

Direct Technical Submission
Date: November 2026

01. Executive Overview & Project Understanding

I am writing to formally present my technical approach and architectural recommendation for Wealth Wisdom's client portal, learning management system (LMS), and financial tracking dashboard. Having evaluated your requirements and carefully reviewed the attached *"My Wealth Dashboard"* wireframe, I am confident in delivering a secure, robust, and maintainable platform built directly on your existing WordPress and WooCommerce setup.

My engineering background spans over 5 years developing enterprise software, web portals, and microservices for international corporations and government entities at Arimac Digital. Because Wealth Wisdom handles sensitive personal financial data—income, expenditure, debt balances, and net worth calculations—this system requires far more than basic theme customization. It requires disciplined database design, strict user data isolation, and a clean administrative backoffice that empowers your coaches to operate without ongoing developer dependency.

02. Implementation Strategy for the "My Wealth Dashboard" Wireframe

The wireframe you provided establishes a clean, purposeful user interface. Here is precisely how each component will be technically realized inside your WordPress ecosystem:

Top Header: Wealth Metrics

Displays live **Net Worth (R 425 000)** with variance tracking (*+R35 000 since last update*) and **Monthly Surplus (R 5 200)**. Dynamically computed by backend triggers whenever new data is saved.

"Keep Going" Course Banner

Dynamic progress bar showing active course progress (e.g., *Week 2 of 6 · Next: Module 3*). Deeply integrated with LearnDash so that lesson completions update the status bar immediately.

My Financial Snapshot Card

Summary of Income (R 42k), Expenses (R 36.8k), Assets (R 780k), and Liabilities (R 355k) with *Update* and *Progress* actions. Stores timestamped versions to allow historical comparison.

Navigation: My Finances & Learning

Dedicated sub-views for historical financial comparisons, goal tracking, and detailed module listings with downloadable worksheets, embedded video players, and assignment submission dropzones.

Navigation: Resources & Documents

A personalized resource vault. Admins can attach specific exercise files or bespoke worksheets directly to individual client profiles without requiring enrolment in an active 6-week cohort.

Navigation: Coaching & Explore

Booking links and private action plans from coaching consultations, paired with an integrated WooCommerce catalogue tile (*Explore*) to renew programmes or acquire supplementary materials.

Data Retention Guarantee: When a client's 10-week course access expires, their WordPress account remains active. Their financial history, saved snapshots, and past workbook uploads remain permanently accessible in a read-only archive, allowing them to log back in at any time to renew memberships or review personal growth.

03. Architecture, Plugin Selection & Custom Code Boundary

To keep long-term maintenance straightforward and prevent software fragility, I strictly adhere to your preference: **leverage established, battle-tested WordPress plugins for standard functionality, and write clean, bespoke PHP extensions only where standard plugins fall short.**

FUNCTIONAL DOMAIN	RECOMMENDED COMPONENT	IMPLEMENTATION LOGIC & OPERATIONAL RATIONALE
Learning Management (LMS)	LearnDash LMS	Handles 6-week structured curricula, video embeds, assignment upload dropzones, and coaching evaluation workflows. Native WooCommerce integration automatically enrols clients upon checkout.
Membership & Access Control	MemberPress / WooCommerce Memberships	Enforces the 10-week time-limited access window calculated from the course start date. Automates expiry reminders, subscription renewals, and keeps expired users intact without data loss.
Personalized Client Dashboard	Custom Endpoint on WooCommerce My-Account	Extends WooCommerce's core account architecture with custom template overrides. Renders the 6-tile layout matching your wireframe without bloating your site with third-party page builders.
Financial Snapshot Engine	Bespoke WordPress Plugin (PHP & MySQL)	**Custom Developed:** Dedicated custom database tables (`wp_ww_snapshots`) capturing timestamped records of income, expenses, assets, liabilities, and calculated surplus. Completely independent of course lifecycles.
Individual Resource Assignment	Custom Post Type + User Meta Mapping	**Custom Developed:** Simple WordPress admin interface allowing coaches to select any media or worksheet and link it directly to a specific user's dashboard tab.
Data Security & Isolation	Wordfence Security + Database Hardening	Parameterized SQL queries, nonces on all form submissions, strict capability checks preventing horizontal user data access, and two-factor authentication (2FA) for coach/admin logins.

04. Phased Delivery Schedule & Target Milestones

I have structured the development lifecycle to meet your priority of an initial functional prototype by **1 December 2026**, followed by thorough quality assurance, coaching handover, and full system launch before year-end.

Phase 1: Foundation & Working Prototype

Target: 1 December 2026

- Staging site configuration and plugin deployment.
- LearnDash course hierarchy setup for the 6-week programme.
- WooCommerce checkout to membership enrolment automation.
- Custom dashboard wireframe implementation (HTML/CSS/PHP).
- Basic financial input form calculating Net Worth & Monthly Surplus.
- **Deliverable: Live working prototype for internal team testing.**

Phase 2: Advanced Snapshots & Resources

Target: 15 December 2026

- Historical financial snapshot database architecture and versioning.
- Snapshot comparison UI (visualizing financial progress over time).
- Individual resource assignment module in WordPress admin.
- Assignment upload and coach feedback loop integration.
- Expiry and subscription renewal lifecycle rules.
- **Deliverable: Feature-complete portal ready for validation.**

Phase 3: Security Audit & System Hardening

Target: 22 December 2026

- Client data isolation audit (ensuring zero data leakage across accounts).
- End-to-end payment and automated subscription lifecycle testing.
- Mobile and tablet responsive testing across Safari, Chrome, and Firefox.
- Speed, caching, and database query optimization.
- Security hardening, SSL verification, and admin 2FA enforcement.

Phase 4: Training, Handover & Final Go-Live

Target: 31 December 2026

- Preparation of comprehensive administrator and coach video guides.
- Step-by-step written documentation covering course creation and resource assignment.
- Live screen-share coaching and handover session for Wealth Wisdom staff.
- Seamless production cutover and post-launch monitoring.
- **Includes 30 days of direct post-launch warranty and assistance.**

> **Commercial Alignment & Budget Discussion:** To ensure complete alignment with your budgetary goals and preferred billing model, I propose that we finalize the exact milestone breakdown and fixed commercial terms during our initial discovery discussion. This ensures you pay only for what you need with zero surprises or hidden scope creep.

05. Verified International Production Track Record

Below are enterprise-level international software platforms I have developed while working with top-tier technology firms, directly demonstrating the engineering rigor, user dashboard management, and financial security principles required by Wealth Wisdom:

01. Multi-Tenant E-Commerce Platform & Financial Microservices

Arimac Digital · Enterprise Client

Backend / Full-Stack Engineer · Multi-Tenant Architecture

Engineered a scalable microservices-based, multi-tenant platform supporting customer portals and administrative backoffices with isolated accounts, automated billing, and transactional financial reporting.

- Developed and maintained Node.js/Express BFF services for customer and admin applications, aggregating and orchestrating APIs across multiple backend microservices.
- Developed and integrated Laravel Lumen microservices covering business domains including customers, orders, payments, products, promotions, tax, shipping, reporting, activities, and tenant management.
- Implemented authentication and authorization using Keycloak with OAuth2/OIDC and JWT, enforcing complete data isolation between separate customer accounts.
- Integrated Strapi CMS and external REST APIs, while containerizing services with Docker and managing CI/CD deployment pipelines.

`Node.js, Express.js, PHP 8, Laravel Lumen, Strapi CMS, Keycloak, OAuth2/OIDC, JWT, MySQL, Docker, GitLab CI/CD, REST APIs`

02. Adrik News & Media Platform

Arimac Digital · Client: Adrik, Kuwait

Backend Engineer · High-Concurrency Paid Media & Subscriptions

Developed a bilingual (English/Arabic) digital ecosystem with paid subscriber access, push notification pipelines, newsletter dispatches, and multi-portal backend orchestration for an international client in Kuwait.

- Architected three distinct Node.js/Express BFF services connecting web, iOS/Android mobile apps, and administrative backends to core services.
- Engineered token validation middleware, user management, and session recovery via Keycloak (OAuth2/OIDC, JWT).
- Integrated subscription payment processing, OneSignal push notifications, and transactional SMS gateway integrations.
- Containerized services with Docker and deployed across development, UAT, and production environments on Kubernetes clusters.

`Node.js, Express.js, Keycloak, OAuth2/JWT, OneSignal, SMS Gateway API, REST APIs, Docker, Kubernetes, GitLab CI/CD`

03. DIMO Enterprise Gate Pass & Logistics Management System

Arimac Digital · Client: DIMO Lanka

Backend Engineer · Mission-Critical Workflow & ERP Integration

Engineered a complex vehicle dispatch and gate-pass approval platform for a premier diversified conglomerate, integrating directly with SAP ERP and processing multi-tier organizational approvals.

- Developed an enterprise BFF/API gateway handling Keycloak OAuth2/JWT authentication, role-based approval hierarchies, and Kafka audit streams.
- Engineered the core domain persistence layer utilizing MySQL with Flyway database migration scripts, preserving strict historical audit logs.
- Implemented secure document storage on AWS S3 with automated ClamAV antivirus scanning, alongside integrations with Azure AD and SAP.

`Java 21, Spring Boot 3.4.5, Spring Security, OAuth2/JWT, Spring Kafka, MySQL, Flyway, Docker, AWS S3, Azure AD, SAP, ClamAV`

05. Verified International Production Track Record (Continued)

04. Al Ain Museum V2 — Headless Content & Multilingual Digital Platform

Arimac Digital · Client: Al Ain Museum, UAE

Frontend & CMS Integration Engineer · Cultural Institution Portal

Engineered the modern digital portal for a premier UAE government cultural institution, building a scalable Next.js frontend integrating with an enterprise CMS repository.

- Led frontend integration for the V2 ecosystem utilizing Next.js, React, TypeScript, and Sitecore Helix modular architectural principles.
- Designed high-performance REST API content retrieval layers, replacing legacy query pipelines for superior rendering speed.
- Engineered recursive rendering logic to traverse nested content hierarchies, supporting rich multimedia exhibits and bilingual displays.
- Live platform URL: alainmuseum.ae/en

```
Sitecore, Sitecore JSS, Next.js, React, TypeScript, C#, .NET, Sitecore Helix, RESTful APIs
```

05. Holsten Arabia — Headless CMS Architecture & Multilingual Portal

Arimac Digital · Client: Holsten Arabia

CMS Architect & Frontend Integration Engineer · Global Beverage Brand

Developed and maintained the regional web platform for an internationally recognized beverage brand, architecting custom content structures, block-based editors, and localized content delivery.

- Architected the complete CMS tree, custom document types, and reusable Block List / Block Grid components in Umbraco CMS.
- Developed custom server-side Razor components, resolvers, and integrated the Next.js/React frontend via REST APIs.
- Engineered custom inquiry form pipelines and bilingual English/Arabic localization with seamless RTL layout switching.
- Live platform URL: holstenarabia.me/en/

```
Umbraco CMS, Next.js, React, TypeScript, C#, .NET, REST APIs, Razor Views
```

06. Training, Documentation & Long-Term Ownership

My goal is to leave Wealth Wisdom with complete autonomy. At handover, your team will receive:

Video Tutorial Library

Recorded step-by-step screencasts demonstrating how to upload new course modules, add videos, review uploaded student assignments, and assign individual resources.

Written Administrator Guide

A concise PDF manual detailing operational workflows, user account management, time-limited membership adjustments, and financial snapshot export procedures.

30-Day Post-Launch Warranty

One full month of direct post-deployment support to troubleshoot any questions, adjust configurations, and guarantee 100% operational peace of mind.

Next Step: 30-Minute Discovery & Scope Alignment

Let us review your wireframe details together, confirm any specific access rules, and mutually agree on a fixed milestone price.
