To: Leadership Team & Founders, Wealth Wisdom | Web: wealthwisdom.co.za | South Africa **FORMAL TECHNICAL PROPOSAL**

01. Project Understanding & Technical Objective

Wealth Wisdom provides dedicated financial coaching programmes, requiring a unified digital client hub that combines structured six-week course delivery, interactive assignments, and long-term personal financial tracking. Your existing foundation uses WordPress, WooCommerce, and PayPal. Your objective is to expand this into a secure, intuitive Client Portal, LMS, and Financial Snapshot Dashboard that coaches can manage independently without technical friction, while ensuring sensitive client balance sheets remain strictly protected and preserved.

My Architectural Approach in Brief:

- **Lean WordPress Ecosystem:** Combine LearnDash LMS with your existing WooCommerce and PayPal setup for automated enrolment, deliberately avoiding secondary membership plugins to eliminate conflicting access rules.
- **Single Custom Engine:** Build one lightweight plugin (*Wealth Wisdom Portal*) handling the customized client dashboard, private document downloads, and the dedicated financial snapshot tracking engine.
- **Permanent Financial Data Layer:** Client financial snapshots and learning histories are gated strictly by user authentication, never by course access expiry. Expired clients retain full access to their balance sheets and can log in to renew anytime.

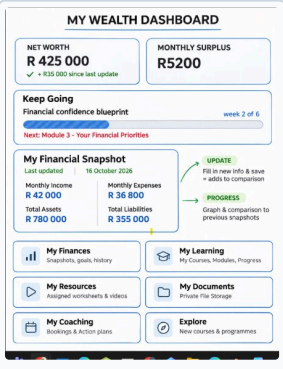

Background & Transferable Competencies:

My recent production builds were engineered on other enterprise platforms—including the Holsten Arabia multilingual portal on Umbraco CMS, a multi-tenant e-commerce backend with per-tenant data isolation on PHP 8 and Laravel Lumen, and an enterprise gate-pass platform on Java and Spring Boot for DIMO Lanka. The core architectural disciplines required for Wealth Wisdom—strict per-user data isolation, subscription and access lifecycle enforcement, role separation, audit logging, and historical data preservation—transfer directly to this WordPress build. This specific implementation will be built entirely within native WordPress standards. To eliminate technical risk, I am prepared to demonstrate a working proof-of-concept of the financial snapshot module on a staging site before contract sign-off.

COMMENCEMENT	WORKING PROTOTYPE	FULL SYSTEM DELIVERY	COMMERCIAL QUOTES
Immediate on Award	**~3 Weeks from Start**	**8 Weeks Total**	**Within 1 Day of Call**

02. Understanding & Architectural Mapping of Your Wireframe

I have analyzed your *"My Wealth Dashboard"* wireframe. Below is the exact implementation mapping for each interface component:

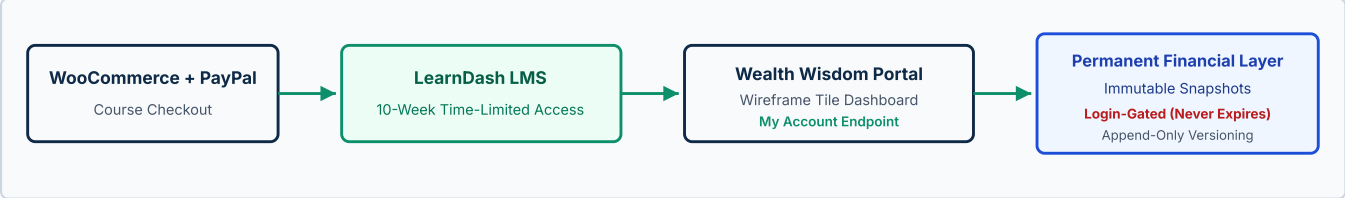

Client Wireframe Concept

WIREFRAME BLOCK	DELIVERY MECHANISM	TECHNICAL REALIZATION & LOGIC
Net Worth & Monthly Surplus	CUSTOM PLUGIN	Dynamic calculation: Assets minus Liabilities (780,000 - 355,000 = 425,000) and Income minus Expenses (42,000 - 36,800 = 5,200). Change indicator compares latest against preceding snapshot.
"Keep Going" Course Banner	LEARNDASH API	Reads active enrolment, progress percentage (Week 2 of 6), and resolves next uncompleted topic link (Module 3 - Your Financial Priorities).
My Financial Snapshot	CUSTOM PLUGIN	Summary card with timestamped date. "Update" creates an immutable snapshot entry. "Progress" renders historical comparison tables and trend charts.
My Finances & My Learning	LEARNDASH + ENDPOINT	My Finances links to the detailed snapshot comparison module. My Learning opens enrolled LearnDash courses, lessons, and video modules.
My Resources & Documents	CUSTOM ENDPOINT	My Resources displays worksheets and exercises assigned by coaches. My Documents serves private client files via access-checked PHP stream.
My Coaching & Explore	PHASE 1 / PHASE 2	Base Scope: Coach notes and custom action plan lists. Explore links to WooCommerce

03. Recommended Technical Approach & Lean Stack

The core architectural principle for this system is: **fewest possible plugins, single source of truth for user access, and one dedicated custom plugin for business logic that standard tools cannot fulfill.**

SYSTEM LAYER	RECOMMENDED TOOL	ARCHITECTURAL RATIONALE & OPERATIONAL MECHANICS
LMS Core	**LearnDash LMS** (Tutor LMS evaluated)	While Tutor LMS is viable, LearnDash is recommended due to its deep WooCommerce integration, robust group management, and mature assignment review pipelines. Coaches utilize the LearnDash Group Leader role to review and approve submitted worksheets without needing full administrator access.
Payments & Access	**WooCommerce + LearnDash Integration**	Native WooCommerce integration links purchases directly to course enrolment via PayPal. We deliberately avoid a secondary membership plugin to prevent dual-system synchronization failures and access state conflicts.
Cohort Access Control	**Custom Cohort Handler** (Custom Extension)	LearnDash calculates course expiry from enrolment timestamp by default. We introduce a custom hook enabling access to run for 10 weeks calculated from an agreed programme cohort start date, supporting scheduled group intakes.
Subscription Extensions	**Option A vs. Option B** (Two Viable Paths)	**Option A:** WooCommerce Subscriptions extension enabling automated monthly recurring billing via PayPal. **Option B (Recommended for Launch):** Standard one-time "Access Extension" products where clients renew on demand, adding automated recurring billing later. This avoids complex recurring subscription overhead on day one.
Portal & Financials	**Custom Plugin:** *Wealth Wisdom Portal*	Custom WooCommerce My-Account endpoint rendering the wireframe dashboard. Financial tracking utilizes dedicated custom database tables (`ww_financial_snapshots`) storing timestamped, immutable financial balance sheets. Data is gated solely by login, ensuring client records remain intact after course expiry.
Private Documents	**Protected Storage Handler**	Client documents and coach assignments are stored outside public media paths, served exclusively through an authenticated PHP gateway (`readfile()` with strict permission checks), preventing direct URL indexing.

Roles & Access Governance Matrix:

USER ROLE	LEARNING & COURSE MATERIALS	CLIENT FINANCIAL RECORDS	RESOURCE & DOCUMENT MANAGEMENT
Client	Access enrolled course during active 10-week window; upload assignments.	Full edit and view rights to own balance sheet; historical snapshot comparison.	View assigned worksheets; download and upload to private personal folder.
Coach (Group Leader)	Review and grade submitted assignments for assigned cohort clients.	View financial summaries for assigned clients only (if authorized by client).	Assign specific library resources to individual clients or assigned groups.
Administrator	Create and edit courses, lessons, topics, quizzes, and pricing products.	System administration; access to client financial records is logged for audit.	Central library management; full administrative override and export rights.

04. Features Requiring Custom Development vs. Plugin Configuration

SYSTEM COMPONENT	IMPLEMENTATION TYPE	DETAILED TECHNICAL SCOPE & DELIVERABLE
Client Dashboard UI	`CUSTOM CODE` (Light)	Template override on WooCommerce My Account rendering the wireframe's 6-tile layout, Net Worth summary cards, and dynamic "Keep Going" status bar.
Financial Tracker Engine	`CUSTOM CODE` (Core)	Dedicated database schema (`ww_snapshots`, `ww_snapshot_items`), income/expense/asset/liability entry forms, auto-calculation, and Chart.js trend graphs.

05. Security Architecture, Data Isolation & POPIA Alignment

Because Wealth Wisdom handles sensitive personal financial data, security cannot rely on generic assumptions. I enforce a strict defensive architecture across the application layer:

SECURITY DOMAIN	IMPLEMENTED STANDARD	ENGINEERING PROTECTION MECHANISM
Financial Field Encryption	Application-Level Libsodium	Sensitive financial data fields are encrypted at the application level using PHP Libsodium before database insertion. The encryption key is isolated outside the database in server environment variables. (No WordPress plugin provides automated database encryption at rest).
Data Access Isolation	Strict User-ID Validation	All database queries utilize wpdb-prepared statements with mandatory session user-ID checks. Zero client balance sheet queries can execute without verified ownership validation.
Endpoint Security	Solid Security Suite + Cloudflare	Deployment of Solid Security (one dedicated suite—never running conflicting security tools) coupled with Cloudflare web application firewall, enforcing HTTPS, brute-force locking, and request sanitation.
Authentication Security	Two-Factor Authentication (2FA)	Enforced 2FA for all administrative and coaching accounts; optional 2FA for clients. Strict session timeouts for inactive dashboard tabs.
Audit Logging	Internal Security Audit Trail	Every administrative inspection or coach review of client balance sheet records is written to an immutable internal audit log.
Caching & Leakage Policy	Strict Portal Exclusions	All client portal endpoints (`/my-account/portal/*`) and logged-in user requests are strictly excluded from page caching to prevent cached financial data leaks. No caching plugin bloat.
POPIA Regulatory Compliance	Data Privacy Standards	Alignment with South African POPIA regulations: transparent privacy consent notice on signup, client self-service data export, and standard account deletion procedures.

06. Scope Definition: Prototype vs. Full System

To provide complete delivery clarity, the development scope is split into two precise definitions:

Initial Working Prototype Scope (~3 Weeks):

- Dedicated staging environment configuration.
- Sample six-week course structure configured in LearnDash.
- WooCommerce checkout to automated enrolment flow via PayPal sandbox.
- Core responsive client portal rendering the wireframe's 6-tile grid.
- Functional financial tracking form computing Net Worth and Monthly Surplus.
- Saving one timestamped financial snapshot to the database.

Excluded from Prototype: Historical comparisons, resource assignment admin, subscriptions, security hardening, client training.

Complete Production System Scope:

- Full implementation of all items in the Technical Approach (Section 03).
- Historical snapshot comparison views and trend visualization (Chart.js).
- Resource Library CPT with admin individual client assignment panel.
- LearnDash Group Leader coaching review and assignment grading workflow.
- Private document download gateway with authenticated access control.
- Cohort date access expiry handler (10 weeks from programme start).
- Comprehensive security hardening, libsodium encryption, and POPIA tools.
- Full administrator video guides, written manuals, and live training.

> **Explicit System Exclusions (Both Scopes):** Creation of coaching course content, video production, graphic logo design, content migration, third-party plugin licence purchase costs, web hosting fees, external calendar booking tools (optional Phase 2), native mobile app builds, and direct bank/accounting feed integrations.

07. Third-Party Licences, Hosting & Running Items

In accordance with your preferences, below is the transparent checklist of external software and infrastructure items required to support the platform. *(Commercial amounts are omitted and will be reviewed during our discovery call to select the most cost-effective tiers):*

COMPONENT CATEGORY	REQUIRED / OPTIONAL	OPERATIONAL PURPOSE & HOSTING PREREQUISITES
LearnDash LMS Licence	REQUIRED	Annual core software licence for course builder, quiz engine, and WooCommerce integration add-on. Direct vendor renewal.
Web Hosting Environment	REQUIRED	Existing client host. Prerequisites to confirm: PHP 8.1+, Sodium extension, HTTPS enabled, daily automated server backups.
Transactional Email (SMTP)	REQUIRED	Dedicated delivery service (e.g. Postmark / SendGrid / Mailgun)

08. Project Timeline, Milestones & Feasibility Evaluation

I have structured a phased delivery schedule using calendar durations to maintain predictable progress:

Stage 01: Setup & Discovery — `Duration: 4 Days`

- Staging site creation and PHP/Sodium prerequisite verification.
- Spec confirmation and WooCommerce/PayPal sandbox connectivity.

Stage 02: Prototype Build — `Duration: 2.5 Weeks`

- LearnDash structure setup and client portal wireframe UI implementation.
- Functional financial snapshot form calculating Net Worth & Surplus.

Stage 03: Full Module Integration — `Duration: 2 Weeks`

- Comparison views, Chart.js trends, and Resource Library CPT with admin assignment.
- Cohort-based 10-week expiry logic and private file delivery gateway.

Stage 04: Security, QA & Handover — `Duration: 2.5 Weeks`

- Data isolation auditing, cross-browser testing, and POPIA review.
- Administrator video guides, written manuals, and live training session.

Feasibility Evaluation & Phased Delivery:

• **Working Prototype within ~2.5 to 3 Weeks:** Fully achievable for the focused prototype scope defined in Section 06 upon environment access.

• **Full System Completion:** An accelerated completion before year-end is feasible as a stretch schedule; my standard committed handover timeframe is **8 weeks from kickoff**. This guarantees delivery without compromising security or data validation, while factoring in standard turnaround for staging access, course material ingestion, and December year-end holiday closures. Start availability: **Immediate upon agreement**.

09. Training, Documentation & Post-Launch Handover

To ensure complete operational self-sufficiency for your team, handover includes:

• **Administrator Manual (PDF):** Step-by-step documentation detailing course creation, resource assignment, user management, and snapshot export.

• **Recorded Video Walkthroughs:** Concise screencasts demonstrating common workflows: uploading modules, reviewing student assignments, and granting resource access.

• **Live Interactive Training:** One live screen-share walkthrough with coaching staff, followed by a dedicated follow-up Q&A session.

• **Handover & 30-Day Support:** Full Git source repository transfer. All code and custom assets are fully and unconditionally owned by Wealth Wisdom upon completion. Includes 30 days of post-deployment bug-fix support. Payment terms: milestone-based via Upwork, agreed upon alongside the quote.

10. Key Risks, Mitigations & Core Assumptions

IDENTIFIED RISK	ENGINEERED MITIGATION	PROJECT ASSUMPTION
Cohort vs. Purchase Expiry	Custom date hook calculating expiry from scheduled cohort start dates.	Programmes run on set dates rather than indeterminate future starts.
Public Document Exposure	Protected non-public directory with authenticated PHP stream gateway.	Server allows directory storage outside public `wp-content/uploads`.
Holiday Review Delays	Committed delivery timeline structured over 8 weeks with phased milestone checkpoints.	Client provides timely review feedback within two business days of milestone releases.
Wireframe Scope Growth	Optional elements (calendar bookings, goals) cleanly separated into Phase 2.	Phase 1 focus remains strictly on core portal, LMS, and financial tracking.

11. Questions for You & Immediate Next Steps

1. **Cohort Structure:** Will your courses run on fixed calendar dates for group intakes, or rolling start dates per individual?
2. **Renewal Preference:** Do you prefer Option B (one-time renewal products) for simplicity, or Option A (automated monthly recurring billing via PayPal)?
3. **Coaching Module Scope:** Is the base scope for "My Coaching" (coach notes and action plans) sufficient, or is live calendar booking an immediate requirement?
4. **Financial Data Access:** Which coaching roles should be granted permission to view individual client balance sheet records?
5. **Hosting Specifications:** Can you confirm the current hosting platform and PHP version powering wealthwisdom.co.za?
6. **Detailed Specification:** Could you share the detailed project specification document mentioned in your job post?

Immediate Next Step: 20–30 Minute Discovery Call

Let us review your detailed specification together and align on scope. Formal fixed-price quotes for both the prototype and complete system will be delivered within one business day of our call.
