CLIENT: PACIFIC HYDRAULICS NEWCASTLE PTY LTD | Attention: Aaron & Roshan

Technical Assessment & Architectural Recommendation: MYOB Acumatica Branch Balancing

An independent technical assessment to resolve company-type and branch-balancing restrictions in an established MYOB Acumatica environment with 6 years of posted transactions. Preserving historical General Ledger integrity and full audit trails while enabling autonomous branch balancing for **MAIN1** & **DMS**.

6 Years	$6.00 / hr	AU GST & Tax	C# / xRP
AUDIT TRAIL PRESERVED	INTRODUCTORY RATE	AUSTRALIAN COMPLIANT	CUSTOMIZATION AUDIT

Executive Profile & Commitment to Enterprise Quality

While I am new to the Upwork platform, I bring **4+ years of solid software engineering industry experience** working at leading technology companies (such as **Arimac Lanka** and **SLT Digital Lab**), engineering mission-critical platforms and digital architectures for world-famous brands and international corporations (including *Holsten Arabia*, *DIMO Lanka*, and UAE cultural entities).

Because I am establishing my reputation on Upwork, I treat this engagement with the highest priority. If given the opportunity, I will execute this independent assessment with the exact same engineering rigor, data integrity safeguards, and detailed documentation you would expect from a top-tier software consultancy—resolving the branch-balancing restriction between **MAIN1** and **DMS** while strictly protecting your 6 years of posted historical audit trails.

YOUR REQUIREMENT	TECHNICAL ANALYSIS & ASSESSMENT APPROACH
1. Independent Branch Balancing	Design Due To / Due From (interbranch clearing) account mapping in GL Setup (`GL101010`) to automatically generate balancing entries for all cross-branch transactions.
2. Centralized Bank Account (MAIN1)	Configure Cash Management (`CA`) shared cash account permissions so DMS receipts and disbursements clear through MAIN1's bank, auto-posting intercompany loan entries.
3. Branch Financials & Eliminations	Define branch-specific subaccount masks and Analytical Report Manager (ARM) templates for standalone P&L/Balance Sheets, plus elimination rules for consolidated reporting.
4. Australian GST & Recharges	Structure Tax Categories and Tax Zones so intra-group recharges within the same ABN are treated as non-taxable (GST-free), while stock transfers with margin carry proper markup.
5. C# Customization Review	Code-level audit of your test environment customization packages (DAC extensions, BLC event handlers, and Graph overrides) to ensure compatibility with Acumatica's core framework.

Structured 4-Stage Assessment & Recommendation Methodology

STAGE 01 · DIAGNOSTIC

Environment & Error Diagnostics

- Analyze exact system version, build number, and company configuration screen (`CS101500`).
- Evaluate error trace when toggling branch balancing against posted transactions.
- Inspect Ledger configuration (`GL201500`) and subaccount segment definitions.
- Deliverable: Diagnostic summary of root constraint locking the company structure.

STAGE 02 · CUSTOMIZATION AUDIT

C# Customization & Code Audit

- Decompile / inspect test environment customization packages for purchasing & branch defaults.
- Audit Acumatica Graph extensions (`POOrderEntry`, `APInvoiceEntry`, `JournalEntry`).
- Verify custom logic does not bypass audit trail validation or create orphan batches.
- Deliverable: Code review findings with security, stability & upgradeability recommendations.

STAGE 03 · OPERATIONAL DESIGN

Interbranch, GST & Cash Workflow

- Design Interbranch Account Mapping table with paired Due To / Due From clearing accounts.
- Configure centralized cash management for MAIN1 bank account usage across both branches.
- Model Australian GST handling for margin markups, intercompany recharges, and stock transfers.
- Deliverable: Operational configuration matrix covering purchasing, warehouses, and payments.

STAGE 04 · RECOMMENDATION

Formal Written Strategy & Roadmap

- Formulate transition strategy: In-place migration vs. New Balancing Ledger cutover approach.
- Provide step-by-step test environment replication plan and data validation scripts.
- Provide internal team walkthrough guide or handover for configuration rollout.
- Deliverable: Executive Written Assessment Report + 1-hour discovery & Q&A session.

Solving the "Posted Transactions" Restriction: Two Evaluated Paths

Path A: Balancing Ledger Cutover

Introduce a new Actual Ledger configured with branch balancing as of a designated cutover date. Historical data remains intact on the legacy ledger; opening balances roll forward with balanced intercompany accounts.

Path B: Subaccount Masking & Auto-GL

Maintain the company type but enforce branch balancing through segmented subaccounts and automated C# graph extensions that post synthetic interbranch clearing lines before batch release.

Path C: Database Script Migration

In a dedicated sandbox, analyze database-level ledger type updates with scripted historical zero-sum balancing batches, validating trial balance reconciliation down to the cent.

Assessment Fee, Estimated Hours & Availability

Capped Hours & Introductory Fee

• **Special Introductory Rate: $6.00 / hour** to secure my first 5-star review on Upwork.
• **Estimated Hours:** Capped at **12 – 16 Hours** total (~$75 – $95 total investment for Pacific Hydraulics).
• **Turnaround:** 4 to 6 business days from receiving environment access/screenshots.

Collaboration & Working Style

• **Availability:** Immediate kickoff (<20 hrs/week dedicated).
• **AU Time Zone:** Direct overlap with Australian Eastern Standard Time (AEST) business hours.
• **Deliverables:** Comprehensive written recommendation document + review meeting with Aaron & Roshan.

Relevant Enterprise Project Experience (From Software Company Roles)

DIMO Enterprise Gate Pass & Dispatch Management System (ERP & Microservices Integration)

Arimac Digital · Client: DIMO Lanka

Engineered an enterprise vehicle dispatch and gate pass management platform for a premier conglomerate, integrating directly with SAP ERP and managing complex multi-branch approval workflows.

- ✓ Architected API gateway and business logic microservices integrating with **SAP ERP systems**, enforcing audit-compliant transaction records.
- ✓ Managed automated database schema migrations using **Flyway**, ensuring zero-downtime database evolution and strict historical data preservation.
- ✓ Enforced role-based access control, Kafka-based audit event logging, and secure external enterprise integrations.

SAP ERP Integration | C# / Java | Flyway Migrations | Kafka Audit Events | Docker CI/CD

Multi-Tenant E-Commerce Platform & Financial Microservices

Arimac Digital · Enterprise Client

Backend and full-stack developer on a microservices platform managing isolated multi-tenant accounts, financial transaction processing, taxes, and reporting.

- ✓ Developed domain microservices covering payments, taxes, reporting, billing reconciliation, and tenant-level financial separation.
- ✓ Configured secure centralized authentication and distributed audit logging via Keycloak (OAuth2/OIDC, JWT).

Financial Reconciliation | Tax & Margins | Multi-Tenant Isolation

Enterprise C# / .NET Platform Integrations (Sitecore & Umbraco)

Arimac Digital · Global & Government Clients

Engineered complex C# and .NET backend pipelines for enterprise platforms including Al Ain Museum (UAE Government) and Holsten Arabia.

- ✓ Developed customized **C#/.NET components**, event pipelines, and server-side resolvers for enterprise content trees.
- ✓ Deep familiarity with .NET reflection, framework overrides, and configuration patch files matching Acumatica's xRP customization architecture.

C# | .NET Core | ASP.NET | Custom Resolvers & Plugins

Technical Competencies Relevant to MYOB Acumatica

ERP & Accounting Logic
General Ledger, Intercompany Accounts, Due To / Due From, Branch Balancing, Eliminations, Australian GST

C#, .NET & Customizations
C#, ASP.NET, .NET Core, Acumatica xRP Framework, BLC / Graph Extensions, DAC Customizations, Web Services API

Data Integrity & Audit
SQL Database Migrations, Flyway, Idempotent Scripts, Historical Audit Trails, Sandbox Replication

Ready to Assist Pacific Hydraulics
Available for immediate discovery call with Aaron & Roshan to review error logs and test environment.

Available Immediately (AEST Overlap)
