UPWORK FIXED-PRICE PROPOSAL | ✓ 4 Years Industry Enterprise Exp | ★ $200 Fixed Price · 100% Non-AI

Technical Proposal: Deterministic Application & Desktop Code Generator (Without AI)

A robust, rule-based code generation engine for desktop and applications. 100% deterministic, offline-capable, and template-driven (no AI hallucinations or API costs). Built to generate clean, maintainable code across your required languages (C#, Java, PHP, JavaScript, Python, HTML/CSS).

New to Upwork — Backed by 4 Years of Proven Enterprise Experience

While I am new to the Upwork platform, I bring **4 years of dedicated industry software engineering experience** working at premier technology companies (including **Arimac Lanka** and **SLT Digital Lab**), building mission-critical enterprise systems for top international corporations across Kuwait, UAE, and Sri Lanka.

4 Years	Non-AI	Multi-Stack	$200 Fixed
SOFTWARE INDUSTRY EXP	100% DETERMINISTIC ENGINE	C#, JAVA, PHP, JS, PYTHON	GUARANTEED ON-TIME DELIVERY

Non-AI Code Generation: Technical Architecture & Core Advantages

1 Template & AST-Based Scaffolding

Uses proven template engines (Mustache / Handlebars / Jinja2 / T4) combined with token parsers to map schema inputs directly to production-ready boilerplate without errors.

2 100% Predictable & Bug-Free Output

Unlike AI models that suffer from hallucinations, non-deterministic outputs, and random syntax drift, rule-based generation guarantees syntactically flawless code every time.

3 Zero API Costs & Fully Offline

Runs entirely on the local machine with no external LLM dependencies, zero recurring token fees, instantaneous millisecond generation speed, and total IP confidentiality.

4 Desktop GUI or Lightweight CLI

Delivered as an intuitive desktop tool (built with Electron/HTML/CSS or C# .NET WPF / Python GUI) or a CLI utility with clean configuration files (JSON/YAML/Forms).

How the Code Generator Works

1. Input / Schema Ingestion

Accepts entity models, database schemas, field definitions, or form inputs defining your classes, endpoints, or UI layouts.

2. Rule & Template Engine

Applies structured language rules, naming conventions, import statements, and design patterns (Repository, MVC, Clean Architecture).

3. One-Click Project Output

Outputs full directories of source files with formatted indentation, ready to compile and run immediately in your target language.

Professional Projects Experience (Enterprise Company Roles)

Project 01: Multi-Tenant E-Commerce Platform

Arimac Digital · Full-Stack & Microservices

Backend and full-stack developer on a microservices-based, multi-tenant e-commerce platform supporting customer-facing and administrative applications. The platform consists of Node.js BFF services, Laravel Lumen domain services, and a Strapi headless CMS.

- ✓ Developed and maintained **Node.js/Express BFF services** for customer and admin applications, aggregating and orchestrating APIs across multiple backend microservices.
- ✓ Developed and integrated **Laravel Lumen microservices** covering business domains including customers, orders, payments, products, promotions, tax, shipping, reporting, activities, and tenant management.
- ✓ Implemented authentication and authorization using **Keycloak with OAuth2/OIDC and JWT**, supporting secure access across distributed services.
- ✓ Integrated **Strapi CMS and external REST APIs**, while containerizing services with **Docker** and working with **GitLab CI/CD** for build and deployment workflows.

Node.js · Express.js · PHP 8 · Laravel Lumen · Strapi CMS · Keycloak (OAuth2/JWT) · MySQL · Docker / GitLab CI/CD

Project 02: Adrik News & Media Platform

Arimac Digital · Client: Adrik, Kuwait

Backend developer on a bilingual (English/Arabic) news and media platform for a Kuwait-based client, with paid subscriptions, newsletters, and a mobile app. Built as three Node.js BFF services connecting the web, mobile, and admin frontends to the core backend API.

- ✓ Developed and maintained **Node.js/Express BFF services** for web, mobile, and admin applications, aggregating and orchestrating calls to the core backend API.
- ✓ Implemented authentication and user management with **Keycloak (OAuth2/OIDC, JWT)**, including email and social-media signup/login, token refresh, password reset, and token validation middleware for protected routes.
- ✓ Built APIs for content and engagement features, including region-based news feeds, search, category menus, paginated articles, comments, bookmarks, likes, author follows, and click tracking.
- ✓ Integrated subscription and payment flows with **OneSignal push notifications** and **SMS delivery** for newsletters and app download links.
- ✓ Containerized services with **Docker** and deployed to **Kubernetes** through GitLab CI/CD pipelines across development, UAT, and production environments.

Node.js · Express.js · Axios · Keycloak · OneSignal · SMS Gateway API · Kubernetes / Docker

Project 03: DIMO Gate Pass Management System

Arimac Digital · Client: DIMO Lanka

Backend developer on a vehicle gate-pass and dispatch management platform for a large enterprise client, built as two Spring Boot microservices within a larger microservices architecture.

- ✓ Developed a BFF/API gateway service handling **Keycloak OAuth2/JWT authentication**, role-based approval workflows, **Kafka-based audit event publishing**, and integrations with **SAP, Google Maps, Microsoft Graph/Azure AD, Strapi CMS, and AWS S3**.
- ✓ Built the core Gate Pass domain service, implementing business logic and persistence using **MySQL with Flyway-managed database schema migrations**.
- ✓ Implemented secure file-upload handling using **AWS S3 with ClamAV virus scanning**, and integrated external enterprise services to support vehicle orders, distance calculation, user management, and content management.
- ✓ Containerized both services using **Docker** and supported CI/CD workflows through **Jenkins and GitLab**, with automated code quality and test coverage checks (SonarQube, JaCoCo).

Java 21 · Spring Boot 3.4.5 · Spring Security · Spring Kafka · MySQL / Flyway · AWS S3 / ClamAV · Jenkins / GitLab CI/CD

Professional Projects Experience (Continued)

Project 04: Al Ain Museum V2 – Sitecore Headless (In Progress)

Arimac Digital · Client: Al Ain Museum, UAE

Frontend and CMS developer working on the rebuild of a multi-site Sitecore ecosystem, developing a scalable Next.js/React frontend and integrating Sitecore Headless CMS through REST APIs.

- ✓ Leading the frontend and Sitecore integration development for the V2 platform, using **Next.js, React, TypeScript, and Sitecore Helix principles**.
- ✓ Replaced previous GraphQL content integration with **REST API–based retrieval**, providing greater control over content rendering and integration.
- ✓ Implemented custom logic to recursively traverse and render nested Sitecore content structures, supporting complex item hierarchies.
- ✓ Customized **C#/.NET components** and collaborated with stakeholders for a major government cultural institution platform.

Sitecore | Next.js / React | TypeScript | C# | .NET | Sitecore Helix | REST APIs

Project 05: Holsten Arabia – Umbraco Headless

Arimac Digital · Client: Holsten Arabia

Frontend and CMS developer on a headless CMS-based web platform for a global beverage brand, using Umbraco with a modern Next.js/React frontend to deliver a multilingual digital experience.

- ✓ Developed and maintained the **Next.js/React frontend** using TypeScript, integrating content from Umbraco through RESTful APIs.
- ✓ Worked with **Umbraco Headless CMS**, developing and managing custom content types, components, and structured content.
- ✓ Developed and customized **C#/.NET components** and integrations to support content delivery and frontend requirements.
- ✓ Implemented responsive frontend experiences and contributed to platform stability and performance across different devices and screen sizes.

Umbraco | Next.js / React | TypeScript | C# | .NET | REST APIs

Multi-Language Technical Competencies (Job Mandatory Skills)

C#, .NET & JAVA

C#, .NET, Java 21, Spring Boot 3, Spring Modulith, OOP, Class/DTO Scaffolding, Strong Typing

JS, TS & DESKTOP/WEB UI

JavaScript (ES6+), TypeScript, Electron, Node.js, React, HTML5, CSS3, Tailwind CSS

PHP, PYTHON & ENGINES

PHP 8, Laravel Lumen, Python, Mustache, Jinja2, AST Parsers, JSON/YAML Schema, REST APIs

📦 $200 Fixed-Price Execution Plan & Deliverables

Turnaround: 3 to 5 Days

1. Input & Template Definition

Confirm schema structure (JSON/YAML or GUI inputs) and define target boilerplate templates.

2. Core Engine Build & Testing

Develop the deterministic generator engine, error-checking, and formatters for output code.

3. Packaging & Handover

Deliver complete source code, executable application, sample templates, and a quick video demo.

Ready to Build Your Non-AI Code Generator

Available to start immediately and deliver a polished, reliable solution within your $200 budget.

Ready to Begin Today
