FULL STACK JAVA / SPRING BOOT 3 | ✓ 5 Years Industry Experience | ★ Long-Term & Contract-to-Hire Ready

Technical Proposal: Custom Web Application Development & Ongoing Support

Delivering a reliable, maintainable, and high-performance custom business web application using **Java 21 / Spring Boot 3** microservices architecture paired with an intuitive, modern frontend (React/Next.js). Designed for seamless team collaboration, rapid problem-solving, and sustainable business growth.

5+ Years	Spring Boot 3	20–25 hrs/wk	$18 – $20/hr
INDUSTRY EXPERIENCE	JAVA 21 & MICROSERVICES	DEDICATED CAPACITY	LONG-TERM CONTRACT

Executive Profile & Industry Experience

As a **Senior Software Engineer with 5 years of industry experience**, I have spent my career at premier software development companies—notably **Arimac Lanka** and **SLT Digital Lab**—building mission-critical enterprise products and custom web platforms for major corporations across the globe (including *DIMO Lanka*, *Adrik Kuwait*, *Al Ain Cultural Institution UAE*, and *Holsten Arabia*).

My core specialization is architecting and scaling backend microservices with **Java 21 and Spring Boot 3** (Spring Security, Spring Modulith, Spring Kafka, JPA/Hibernate, Flyway) alongside modern, responsive frontend user interfaces (React, Next.js, TypeScript). I focus on building software that is clean, decoupled, and easy to maintain, ensuring your business web application scales effortlessly as your operations grow.

Core Pillars Aligned with Your Business Needs

1 Spring Boot 3 & Microservices

Deep experience with modern Spring Boot 3.4+, Spring Modulith, Spring Security 6, Kafka event-driven architectures, and Flyway database migrations for 99.9% uptime.

2 Full-Stack & Frontend UX

Proficient in React, Next.js, TypeScript, Tailwind CSS, and TanStack Query. I bridge backend logic with polished, intuitive, and accessible user interfaces.

3 Maintainability & Clean Architecture

Strong advocate of Domain-Driven Design (DDD), SOLID principles, modularity, OpenAPI/Swagger docs, and automated testing (JUnit 5, Mockito, JaCoCo, SonarQube).

4 Collaborative Problem-Solving

Extensive experience collaborating within Agile/Scrum teams. Proactive communicator who takes ownership of tasks and provides practical solutions to complex business goals.

YOUR PROJECT REQUIREMENTS	MY PROVEN EXPERIENCE & TECHNICAL EXECUTION
Spring Boot 3 & Microservices Architecture	Production mastery of Java 21 / Spring Boot 3, RESTful APIs, Spring Data JPA, Kafka asynchronous messaging, and containerized Docker services.
Full-Stack Frontend & UX Polish	Building responsive, lightning-fast UI components with React / Next.js / TypeScript, intuitive forms, client-side caching, and seamless REST/GraphQL consumption.
Reliability, Scalability & Maintainability	Flyway automated schema migrations, Redis caching, comprehensive error handling, SonarQube code quality gates, and modular architecture.
Long-Term Partnership (<30 hrs/wk, Contract-to-Hire)	Dedicated 20–25 hrs/week commitment for the 3–6 month window with full enthusiasm to transition into a permanent full-time member of your engineering team.

Implementation & Support Roadmap: 4-Phase Delivery

PHASE 01 · ALIGNMENT & SETUP

Architecture Review & Foundations

- Collaborate with your team to review requirements, domain entities, and roadmap.
- Configure Spring Boot 3 skeleton with Spring Security 6, JWT, and OpenAPI.
- Establish database schemas with Flyway versioned migrations (Postgres/MySQL).
- Deliverable: Configured CI/CD pipeline, modular backend base, and initial API specs.

PHASE 02 · FULL-STACK DEVELOPMENT

Core Feature & Component Engineering

- Develop business microservices/domain modules with high-throughput REST APIs.
- Build dynamic frontend views with React / Next.js, state management, and forms.
- Integrate role-based access control (RBAC), user authentication, and data validation.
- Deliverable: Functional end-to-end user workflows tested against business rules.

PHASE 03 · UX & PERFORMANCE

Reliability, Caching & UX Optimization

- Optimize frontend performance (lazy loading, responsive UX, error boundaries).
- Implement Redis caching for hot data and asynchronous Kafka event workflows.
- Enforce comprehensive test suites (JUnit 5, Mockito, Integration tests, JaCoCo).
- Deliverable: High-speed, resilient application with exceptional user experience.

PHASE 04 · SUPPORT & GROWTH

Long-Term Maintenance & Future Scaling

- Continuous monitoring, bug resolution, and iterative business feature releases.
- Provide clear developer documentation, OpenAPI docs, and architecture walkthroughs.
- Seamless transition into ongoing contract-to-hire engagement as your product grows.
- Deliverable: Production stability, happy users, and scalable code base.

How I Ensure the Application is Reliable & Easy to Maintain

1. Modularity & DDD
Using Spring Modulith and clean service boundaries ensures components are decoupled, preventing spaghetti code and allowing new features without breaking existing ones.

2. Versioned Flyway Migrations
All database changes are code-controlled and idempotent, making production deployments, team synchronization, and rollbacks safe and automated.

3. Quality Gates & Docker
SonarQube code quality checks, JaCoCo test coverage standards, and containerized Docker environments ensure identical behavior across dev, staging, and production.

Contract Terms, Schedule & Collaboration Model

⏰ Schedule & Capacity

• **Weekly Allocation:** 20 – 25 hours per week (fits within your <30 hrs/wk requirement).
• **Duration:** 3 to 6 months ongoing, with strong enthusiasm for contract-to-hire.
• **Rate:** $18.00 – $20.00 / hour (within your $15 – $22 posted budget range).
• **Start Date:** Immediate kickoff upon agreement.

🤝 Team Collaboration & Communication

• **Agile Participation:** Active participant in sprint planning, standups, and reviews.
• **Channels:** Responsive on Slack, Teams, Jira, GitHub/GitLab, and Upwork.
• **Transparent Progress:** Clear daily summaries and documented PRs for code reviews.
• **Practical Problem Solver:** Focused on pragmatic business ROI over unnecessary complexity.

Proven Enterprise Project Experience (From Software Company Roles)

DIMO Enterprise Gate Pass & Dispatch Management System (Microservices Platform)

Arimac Digital · Client: DIMO Lanka

Engineered vehicle dispatch and gate-pass management platform for a premier enterprise conglomerate, built as two high-performance Spring Boot microservices within a distributed architecture.

- ✓ Developed API gateway service using **Spring Boot 3.4.5 & Java 21** handling **Keycloak OAuth2/JWT authentication**, role-based approval workflows, and **Spring Kafka audit event publishing**.
- ✓ Built the core Gate Pass domain microservice implementing complex business logic and persistence using **MySQL with Flyway-managed schema migrations**.
- ✓ Integrated external enterprise services including **SAP, Microsoft Graph/Azure AD, and AWS S3**; containerized with Docker and supported CI/CD via Jenkins & GitLab with SonarQube & JaCoCo.

Java 21 | Spring Boot 3.4.5 | Spring Security | Spring Kafka | MySQL / Flyway | Keycloak (OAuth2/JWT) | Docker / CI/CD

NexWare Enterprise Distribution & Warehouse Platform (Full-Stack Application)

Production Full-Stack Web System

Architected a complete modular monolith full-stack web application featuring a Java 21 Spring Boot 3 backend and a high-performance Next.js/React frontend.

- ✓ **Backend:** Built with **Spring Boot 3, Spring Modulith, Spring Security, JPA/Hibernate, PostgreSQL, Redis, Kafka, and Flyway** with comprehensive OpenAPI (Swagger) documentation.
- ✓ **Frontend:** Developed intuitive dashboard using **Next.js, React, TypeScript, Tailwind CSS, TanStack Query, Zustand, and Zod** with server-side pagination and role-based routing.
- ✓ Deployed to AWS EC2 with Docker containers, automated GitHub Actions CI/CD pipelines, and HTTPS.

Spring Boot 3 | Spring Modulith | Next.js / React | TypeScript | PostgreSQL | Redis / Kafka | AWS / Docker

Police Tuk-Tuk Real-Time GPS Tracking & Telemetry System

High-Throughput Enterprise Backend

Designed and implemented a high-reliability microservice REST API for police GPS tracking handling live data streaming and geographic RBAC with 28+ endpoints.

- ✓ Powered by **Java 21, Spring Boot 3, Spring Security, JPA, PostgreSQL, Flyway, Redis, Kafka, and JWT**.
- ✓ Containerized and deployed on AWS EC2 with custom domain, SSL, and automated GitHub Actions.

Java 21 | Spring Boot 3 | Kafka Streaming | PostgreSQL | Flyway

Full-Stack Technical Skills Matrix

BACKEND & MICROSERVICES	FRONTEND & UX	DATA, CLOUD & QUALITY
Java 21, Spring Boot 3, Spring Security, Spring Modulith, Spring Data JPA, Spring Kafka, Flyway, Hibernate, REST APIs	React.js, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Redux Toolkit, RTK Query, Zustand, TanStack Query, Zod	PostgreSQL, MySQL, Redis, Docker, Jenkins, GitLab CI/CD, AWS EC2/S3, Keycloak (OAuth2/JWT), SonarQube, JaCoCo

Ready to Collaborate on Your Web Application

Looking forward to discussing your business vision, tech stack, and next sprint goals on an intro call.

Available for Interview & Kickoff
