AI AUTOMATION & BUSINESS TRANSFORMATION

LUXURY HOSPITALITY

Practical AI Systems • M365 Ecosystem Integration • Operational Excellence for Luxury Events

Client: Ben Tenenblat Ltd (London, UK)
Venues Served: Claridge's, The Savoy, The Dorchester, Private Estates
Engagement: Phase 1 Assessment, Roadmap & Working PoC (£2,000)
Delivery Model: Hands-On Advisory & Implementation Squad

Intelligent Automation for Bespoke Luxury Catering: From Enquiry to Post-Event Analysis

A bespoke, hands-on AI consultancy partnership tailored specifically to Ben Tenenblat Ltd's operational reality. Bridging administration, sales quotations, event logistics, and kitchen production through intelligent automation natively embedded within Microsoft 365—designed to eliminate administrative drag while protecting the artisanal quality, kosher integrity, and white-glove service expected at London's most prestigious venues.

Focus: **Luxury Weddings • Barmitzvahs • Prestigious Galas**

Platform: **Microsoft 365 • Power Automate • Copilot • Claude / OpenAI**

Discipline: **Hands-On Implementation, Not Just Strategy Reports**

Compliance: **UK GDPR • Kosher Protocol • Food Safety Guardrails**

Phase 1 Commitment: **£2,000 Fixed Price • Includes Working PoC**

1. EXECUTIVE VISION: PRACTICAL AI IN HIGH-END HOSPITALITY

Enhancing Human Artistry and Commercial Control Without Inflexible Complexity

The Operational Challenge in Luxury Catering

INDUSTRY REALITIES

Delivering bespoke events at locations like Claridge's, The Savoy, and The Dorchester requires orchestrating hundreds of moving variables under zero-margin-for-error conditions:

- **Laborious Bespoke Quotations:** Manually drafting intricate catering proposals, pricing formulas, and menu variations consumes hours of key staff time, slowing response velocity.
- **Cascading Communication Friction:** A client changing their guest count from 180 to 210 requires manual notifications across kitchen production, hiring, crockery, linens, and transport.
- **Disconnected Departmental Data:** Operational knowledge is often siloed in individual inboxes, Word documents, and chef prep notes, hindering proactive coordination.

Our Hands-On Transformation Philosophy

ADVISORY + BUILD

We share Ben Tenenblat Ltd's conviction: you do not need generic chatbots or theoretical strategy decks. You need a **hands-on technical squad** that builds working systems:

- **Native M365 Ecosystem:** Embedding AI directly into Outlook, Word, and Excel via Power Automate and Copilot so your team adopts it effortlessly without learning alien tools.
- **Strict Human-in-the-Loop Governance:** AI drafts, calculates, and flags; your senior staff approves, signs off, and retains full commercial and culinary authority.
- **Measurable ROI & Working PoC:** Delivering immediate utility in Phase 1 with an interactive proof of concept demonstrating automated brief extraction and quote generation.

2. PHASE 1 SCOPE OF WORK & DELIVERABLES (£2,000 FIXED PRICE)

A Comprehensive 3-Week Diagnostic, Strategic Blueprint and Working Prototype

PHASE 1 DELIVERABLE	CONSULTANCY & ENGINEERING METHODOLOGY	DIRECT VALUE FOR BEN TENENBLAT LTD
Departmental Discovery & Process Audit	In-depth structured interviews with leadership, sales, event planning, and kitchen leads; mapping current end-to-end workflows from inquiry to post-event review.	Clear identification of administrative bottlenecks, duplicated effort, and friction points across departments.
AI Technology & Architecture Blueprint	Evaluating Microsoft 365 Copilot, Power Automate, Claude 3.5 Sonnet / OpenAI APIs, and document automation platforms against your operational requirements.	Objective, vendor-neutral technology stack recommendation balancing power, low running costs, and data security.
Prioritized Opportunity & ROI Matrix	Scoring potential automation initiatives across the 9 business areas on commercial return, implementation complexity, time savings, and risk mitigation.	Clear roadmap highlighting quick wins (immediate payback) versus foundational multi-departmental investments.
Working Proof of Concept (PoC)	Building a functional, interactive prototype (e.g., automated email enquiry parser into draft Word quotation & cover email) tested on real historic event data.	Tangible demonstration of working AI within your business before committing to larger Phase 2 budgets.
Phased Implementation Roadmap & Costing	Detailed breakdown of Phase 2 (Core Sales & Admin Automation) and Phase 3 (Kitchen & Operations) with transparent timelines, budgets, and milestones.	Complete commercial predictability enabling informed board-level investment decisions.

UK GDPR & Data Confidentiality Assurance

High-profile weddings and prestigious corporate events require uncompromising data protection. All recommended AI architectures enforce strict

THE 9 TRANSFORMATION DOMAINS

OPERATIONAL BLUEPRINT

Progressively Connecting Administration, Sales, Kitchen, Logistics & Executive Oversight

Ecosystem: Microsoft 365 + Power Automate + AI
Human Oversight: Mandatory Signoff on Quotes & Allergens
Kosher Compliance: Embedded Dietary Protocols

3. STRATEGIC ARCHITECTURE ACROSS THE 9 BUSINESS DOMAINS

Eliminating Administrative Bottlenecks Across Every Department

1. Email & Task Triage

Intelligent Outlook monitoring that reads incoming correspondence, categorizes urgent client inquiries, extracts action items, drafts contextual replies for review, and flags overdue follow-ups.

2. Quotation Automation

Extracting event specs from inquiries to auto-generate branded Word/PDF proposals referencing approved menus, venue guidelines, and pricing tiers—reducing quote creation from hours to minutes.

3. Creative Trend Intelligence

Monitoring global luxury dining trends, presentation concepts, and seasonal ingredients into an organized, searchable culinary knowledge base strictly filtered for kosher compliance.

4. Packing Lists & Functions

Dynamic generation of event function sheets, staffing schedules, and packing lists (crockery, glassware, linen, service gear) calculated automatically from guest counts and venue logistics.

5. Kitchen & Production Flow

Converting approved menus into prep schedules, scaled ingredient batching, consolidated supplier purchasing sheets, and prominent dietary/allergen safety alerts.

6. Cascading Change Triggers

When guest counts or menus change, the system automatically identifies downstream impacts, recalculates kitchen prep and packing lists, and triggers targeted departmental notifications.

7. Commercial Growth & Upselling

AI analysis identifying upsell opportunities (specialist bars, midnight snacks, premium wine pairings), tracking lost-business reasons, and researching prospective corporate gala partnerships.

8. Management BI Dashboards

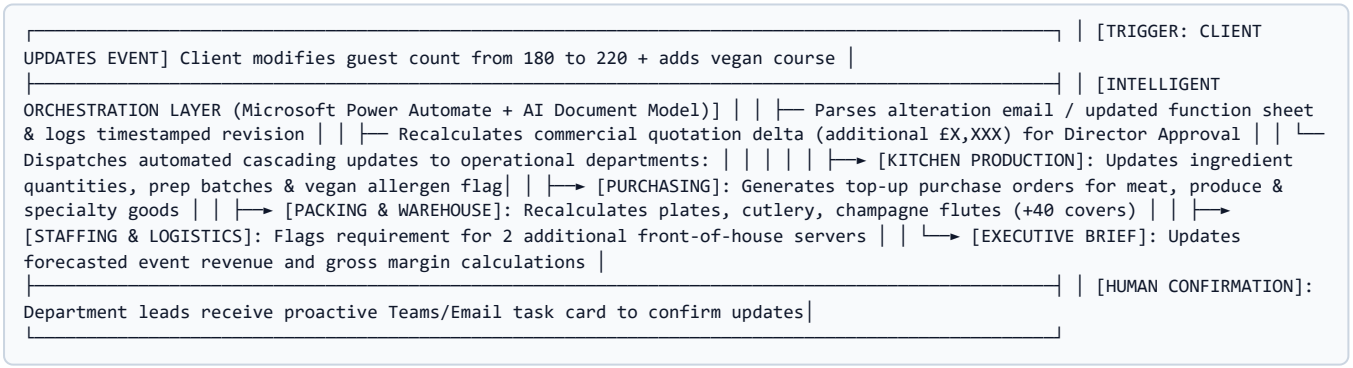

Executive daily briefings highlighting sales pipeline health, revenue projections, upcoming event readiness scores, departmental capacity constraints, and operational risk alerts.

9. Post-Event Cost Auditing

Automated reconciliation comparing initial quote margins against actual staffing overtime, food waste, and ad-hoc transport expenses to refine future pricing models.

4. CASCADING OPERATIONAL INTELLIGENCE ARCHITECTURE

How an Event Modification Automatically Synchronizes the Whole Firm

WORKING PROOF OF CONCEPT & PRECEDENTS

Tangible Working Prototypes and Real Enterprise Automation Systems

VALIDATION

Phase 1 PoC: Working AI Quote & Brief Generator
Integration: Microsoft Word & Outlook Templates
Track Record: Enterprise Workflows, ERP & Reconciliation

5. PHASE 1 WORKING PROOF OF CONCEPT (POC) SPECIFICATION

A Practical, Functional System Delivered in Phase 1 to Validate Value

AI-Assisted Event Brief & Quotation Generator

Target Deliverable for Phase 1

WORKING PROTOTYPE

To fulfill your requirement for a tangible proof of concept, we will build a working prototype during Phase 1 that addresses your most time-sensitive bottleneck: **Client Enquiries & Quotation Drafting**.

How the PoC Operates:

- **Inquiry Ingestion:** Staff paste an unformatted client inquiry email or upload an event questionnaire into a dedicated M365 intake form.
- **Intelligent Parsing:** The AI model extracts event date, guest count, venue (e.g., The Savoy), style of service, budget signals, and dietary preferences.
- **Template Pre-Population:** Auto-populates Ben Tenenblat Ltd's existing branded Word quotation template with appropriate menus, pricing schedules, and personalized cover letters.

Commercial & Quality Controls:

- **Missing Info Detector:** Highlights ambiguities (e.g., "*Client mentioned 180 guests but did not specify canapé duration*").
- **100% Human Approval:** The generated quotation opens directly in Microsoft Word for final staff review, customization, and commercial signoff before sending.
- **Zero Risk Testing:** Evaluated using historical inquiries to measure time saved and accuracy without impacting live operations.

6. VERIFIED ENTERPRISE PRODUCTION CASE STUDIES

Complex Automated Workflows, Reconciliation & Multi-Departmental Systems

Automated Reconciliation & Data Matching Engine (InvoiceIQ)

Automated Document Processing • Janith Kavishka

AUTOMATED MATCHING

Designed and engineered an automated line-item reconciliation engine performing deterministic 3-way matching between supplier purchase orders, delivery dockets, and invoices. Implemented SHA-256 idempotency controls, discrepancy flagging, and automated reconciliation audit logging.

Enterprise Multi-Departmental Workflow & Logistics Platform

Client: DIMO Lanka • Lead: Viranga Lakshan

ENTERPRISE ORCHESTRATION

Architected enterprise microservices coordinating multi-tier role-based approvals, automated document generation, and direct integrations across SAP ERP, Microsoft Graph / Azure AD, and Kafka event audit streaming for premier industrial conglomerate.

Castle Visualizer — Enterprise Data & Multi-Dashboard Platform

Client: Castle Group (Australia) • PM: Lithumitha Ravikumar

PROCESS GOVERNANCE

Led delivery of enterprise data integration platform consolidating disparate operational systems into a real-time executive reporting environment. Managed requirements definition, stakeholder workflows, and user acceptance testing across multi-disciplinary teams.

ROADMAP, SQUAD & ENGAGEMENT TERMS

EXECUTION

Structured Phasing, Team Expertise, and Predictable Commercial Collaboration

Phase 1 Fee: £2,000 Fixed Price (Milestone Based)
Timeline: 3-Week Assessment & PoC Delivery
Long-Term Vision: Staged Implementation & Ongoing Partnership

7. PHASED IMPLEMENTATION ROADMAP

From Immediate Diagnostic to Full Operational Cohesion

Phase 1: Diagnostic, Roadmap & PoC

£2,000 FIXED • WEEKS 1–3

- Structured interviews with sales, planning, kitchen, and operational leadership.
- End-to-end mapping of current documentation and communication flows.
- Evaluate M365 Copilot, Power Automate, and specialized AI models.
- Build and demonstrate the working Quotation / Brief Generator PoC.
- Deliver prioritized Opportunity Matrix and phased implementation investment plan.

Phase 2: Core Sales & Admin Deployment

PHASE 2 • MONTHS 2–3

- Deploy production quotation generation system into live M365 Outlook & Word.
- Configure intelligent email triage, priority flagging, and automated follow-ups.
- Establish the culinary trend and kosher recipe inspiration knowledge base.
- Staff training, user guide documentation, and early efficiency benchmarking.

Phase 3: Event Docs & Kitchen Integration

PHASE 3 • MONTHS 4–6

- Automate packing lists, function sheets, and crockery/glassware calculations.
- Deploy kitchen production sheets, scaled prep schedules, and allergen alerts.
- Implement cascading change triggers synchronizing office and kitchen when events alter.
- Connect ingredient purchasing forecasts with supplier order schedules.

Phase 4: BI Dashboards & Post-Event Audits

PHASE 4 • MONTHS 7+

- Deploy executive BI briefings: sales forecasts, event readiness, and capacity alerts.
- Implement post-event financial auditing: quoted vs. actual costs and waste tracking.
- Establish continuous learning loops to refine future quotation pricing formulas.
- Ongoing monthly retainer for system maintenance, fine-tuning, and new AI capabilities.

8. MEET THE TRANSFORMATION SQUAD

Senior Systems Integration, Data Modeling & Business Process Specialists

Viranga Lakshan

LEAD AI & SYSTEMS ARCHITECT

Associate Software Engineer, Arimac • 4+ Years Systems Architecture

Leads M365 integration, Microsoft Graph APIs, Power Automate pipelines, LLM prompt engineering, AI agent architectures, and enterprise security safeguards.

Microsoft 365 | Power Automate | AI Agents / APIs | UK GDPR

Janith Kavishka

SENIOR DATA & WORKFLOW ENGINEER

Programmer, DMS Electronics • Enterprise Data & Systems Automation

Specializes in data normalization, calculation algorithms (scaling ingredients & equipment), automated document generation, and financial reconciliation.

Data Modeling | Document Automation | Reconciliation | Logic Engines

Lithumitha Ravikumar

TRANSFORMATION PROJECT MANAGER

Associate Project Manager, Arimac • Business Process Governance

Leads stakeholder interviews, business process mapping, change management, standard operating procedure (SOP) authoring, and team adoption training.

Process Mapping | SOP Authoring | Change Mgmt | Sprint Delivery

Next Steps & Discovery Session Scheduling

We are available to commence Phase 1 immediately under your **£2,000 fixed-price budget**. With our 5.5-hour timezone proximity to London, we provide seamless afternoon working sessions and workshops for your team. We welcome an introductory video discussion to align on your immediate priorities.
